

Junior to Intermediate Hydrogeologist / Environmental Geoscientist / Environmental Engineer

The Position: We're looking for a hydrogeologist, engineer or geoscientist with up to 10 years of experience in environmental consulting or engineering. The position includes a mix of field and office assignments with tasks such as oversight of well drilling and testing programs, field investigations, data compilation and analysis, project management, and report and proposal writing. General qualifications include:

- Bachelor's or post-graduate degree in hydrogeology, earth science, environmental engineering or equivalent.
- Excellent written and verbal communication skills.
- Professional or in-training status with Engineers and Geoscientists BC (GIT/EIT, P.Geo./P.Eng.), or eligibility for registration.

While direct experience in hydrogeology is a definite asset, candidates with associated/transferable skills and work experience will be considered including geotechnical or contaminated sites experience.

Western Water Associates: Established over a decade ago by a core group of hydrogeologists, Western Water Associates is a growing employee-owned environmental consulting company with 15 full-time staff and offices in Vernon, Prince George and Victoria, BC. We have an established network of clients including local water districts, government, civil engineering firms, First Nations and industry, and also provide services to the land development and natural resource sectors. We believe in providing a high-quality product to our clients and maintaining relationships through consistent service and reliability. We have a friendly, inclusive culture of individuals who enjoy what we do and work hard but share a philosophy of the importance of work-life balance.

What We Offer: Western Water is a technically strong, specialist consulting firm with a small company feel and casual working environment. You will know all your colleagues and interact with company leadership. Our goal is to provide a work environment that supports your hydrogeological curiosities and career goals while encouraging you to make it to the ski hill on powder days. Western Water is also employee owned and we believe in sharing the responsibility and rewards of ownership. Equity ownership is a possibility for proven team members.

You will have direct and frequent access to senior staff, professional guidance and **mentorship**, opportunities for **professional development**, both internally with one of the largest standalone hydrogeology groups in the Province, and externally. You can expect to work in a wide **variety** of hydrogeology areas including water supply, groundwater monitoring, flowing artesian wells, impact assessments, wastewater and stormwater disposal. Our **competitive compensation** package includes wellness benefits, RRSP Plans, health benefits and profit sharing .

Location: This current opportunity will be based out of our Vernon head office in British Columbia's northern Okanagan Valley. Vernon is a vibrant and growing community offering abundant recreational opportunities in all four seasons and an excellent community to grow and raise a family. Vernon is located 45 minutes north of Kelowna and provides easy access to the best cultural experiences the region has to offer, as well as the Kelowna International Airport and UBC Okanagan.
